INBOUND & OUTBOUND

The secure email service operates at internet level, eliminating threats before inbound emails reach client gateways and before outbound emails reach your customers or suppliers.

BASED IN THE EU & UK

This is one of very few email security solutions which is not based in the USA. This means your data and emails is not subject to US privacy laws.

FILTERING

Filtering takes place on multiple levels, with layers of security and a vast range of checks carried out on all inbound and outbound emails.
